

Biomolecular Engineering Lab

REQUIMTE-Departamento de Química

Campus de Caparica

We are currently recruiting collaborators holding a PhD in Biochemical Engineering, Biotechnology, Chemistry or related areas to work in the project “Biomimetic structures for protein probing”. The work will involve molecular modelling, solid-phase combinatorial chemistry and high-throughput screening techniques, as well as conventional chemistry and biochemistry methods applied to protein production, purification and detection.

Check the FCT's [Advanced Fellowships and Grants](http://alfa.fct.mctes.pt/apoios/bolsas/index.phtml.pt) web page for funding schemes (<http://alfa.fct.mctes.pt/apoios/bolsas/index.phtml.pt>).

If you are interested in joining the group, please send your CV to **Cecília Roque** (cecilia.roque@dq.fct.unl.pt)
